

Product Brief

As one member of the low-power, high-integration family of Telink wireless SoC solution, the TLSR8368 is dedicated to 2.4GHz RF System-On-Chip solution, such as wireless keyboard, non-audio remote control applications, etc.

The TLSR8368 integrates an advanced 2.4GHz RF transceiver, a powerful 32-bit MCU, 16KB on-chip OTP, 6KB on-chip SRAM, a 10bit ADC, a quadrature decoder (QDEC), four-channel PWM, abundant I/O interfaces, and nearly all of the peripheral blocks needed to construct a powerful 2.4GHz RF System-On-Chip solution. Few external components are needed to satisfy customers' ultra-low cost requirements.

The TLSR8368 is RoHS-compliant and 100% lead (Pb)-free.

Target Applications:

- Wireless keyboard
- Non-audio remote control

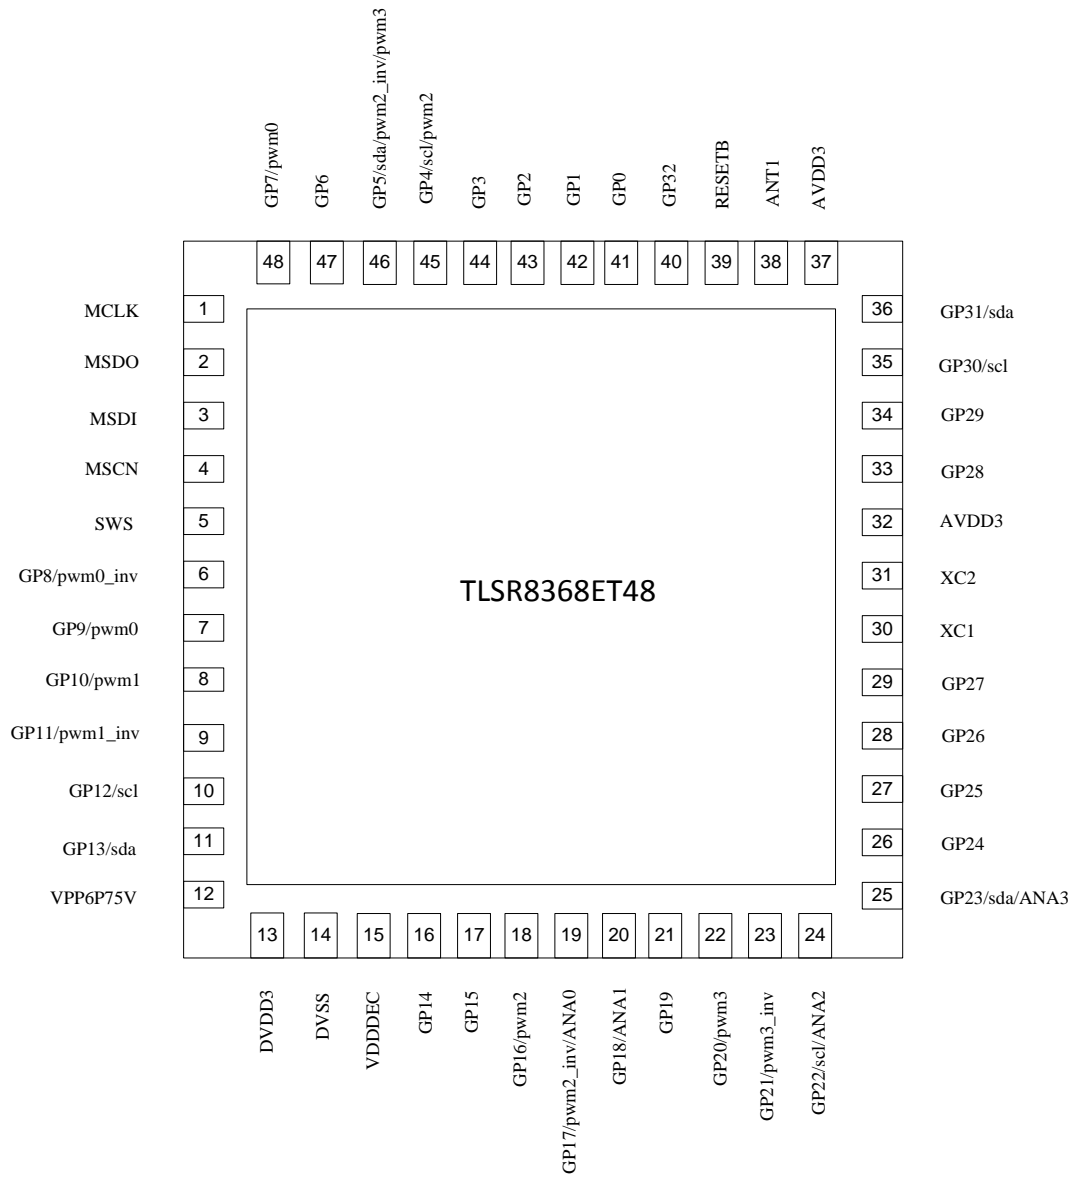

Key Features:

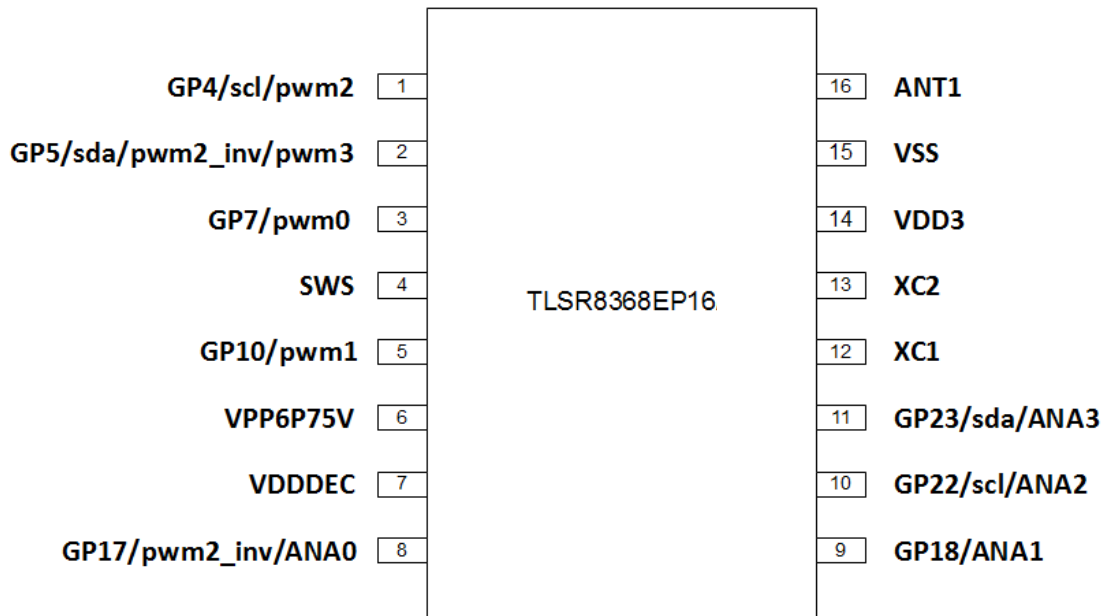

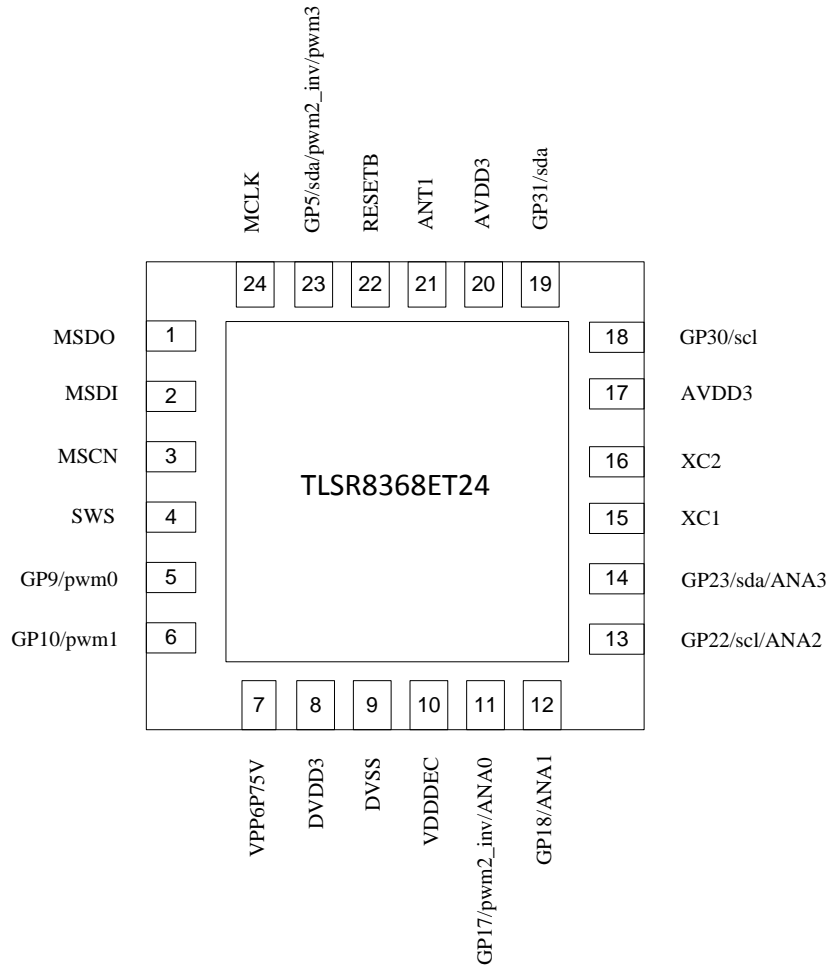

— General features

- Embed 32-bit high performance MCU with clock up to 48MHz
- Program memory: 16KB on-chip OTP
- Data memory: 6KB on-chip SRAM
- 16/12MHz Crystal and 32KHz/32MHz embedded RC oscillator
- Up to 38/14/9 GPIOs, with configurable internal pull-up or pull-down resistors
- Debug interface: SWS (Single Wire Slave)
- Supports MSPI interface (only for TLSR8368ET48 & TLSR8368ET24) and I2C Slave
- Embeds a SAR ADC: Up to 10bit resolution and 4 input channels.
- Embeds one quadrature decoder (QDEC)
- Supports four-channel PWM output
- Embeds three general 32-bit timers Timer0~Timer2.
- Timer2 is programmable as watchdog

- Operating temperature: -40°C~+85°C industrial temperature range
- RF features
 - 2.4GHz RF transceiver, working in worldwide 2.4GHz ISM band
 - Adaptive frequency hopping
 - RF link data rate: Configurable as 2Mbps or 250Kbps
 - Rx Sensitivity: -88dBm at 2Mbps mode, -97dBm at 250Kbps mode
 - Tx Output power: up to +6dBm
 - Auto acknowledgement and retry
 - Single-pin antenna interface
 - RSSI monitoring
- Power management features
 - Power supply of 1.9V~3.6V
 - Embedded low battery detection
 - Multiple stage power management to minimize power consumption
 - Low power consumption:
 - ◇ Transmitter mode current: 15mA @ 0dBm power
 - ◇ Receiver mode current: 12mA
 - ◇ Suspend mode current: 10uA
 - ◇ Deep sleep mode current: 0.7uA
- Package
 - TLSR8368ET48, 48-pin QFN 7×7 mm
 - TLSR8368ET24, 24-pin QFN 4 X 4 mm
 - TLSR8368EP16, 16-pin SOP16L_10X6 mm
 - DICE: TLSR8368ED

Pin layout:

Development tools:

A full set of development tools for the 2.4GHz RF System-On-Chip solution are provided, which include EVB, reference design and SDK for customers to perform evaluation, quick application prototyping and firmware development.

Company Profile:

Telink Semiconductor Co., Limited is a fabless semiconductor company that provides highly integrated radio-frequency and mixed-signal System-On-Chip (SoC) solutions for a variety of communication and control applications. We serve numerous markets including consumer electronics, medical instruments, industrial control, home automation and smart energy etc.

Our product portfolio currently includes 2.4GHz standard and proprietary wireless SoC, touch screen and touch button controller, and generic wireless MCU, all offering high performance, small silicon area, and low power consumption. We integrate high performance radio frequency, analog and mixed signal front end with efficient digital signal processing, digital communication and control functions into our SoC solutions in standard CMOS process technology.

We provide our customers with world leading level of wireless performance at a price level that is appealing to even the most cost-sensitive products. Our proprietary optimized hardware and software platform makes it extremely easy to design into existing or emerging products, offering our customers rapid time-to-market and exceptional system design value.
