

This is supposed to be a '%' sign, but this sign is not on the devo font. I suggest we either remove it, or replace it with something else.

There is a 2 character place here, I suggest we move the scales (yellow) each one place closer to each other.

In general, in every place that there is a pointing arrow I would suggest that the text will be at least 2 spaces away from the arrow so when the arrow is pointing on a specific item the text won't move.

The following pages have the above problem:

1. Model menu (in the model menu the 'double character' doesn't appear, but it's more esthetic that way.)
2. Model setup> file>(...) all sub menus
3. Main page config>load

This double character is what happens when the pointing arrow leaves the selection.

```
Model menu
1.>Model setup
2.Reverse
3.D/R & Exp
4.Subtrim
5.Travel adjust
6.Throttle curves
7.Pitch curves
8.Throttle hold
9.Gyro sense
10Swash
11Fail-safe
```

When changing Model setup>Mixer GUI to <standard> the following items are added to Model menu most of them are broken, D/R even crashes the emulator.

I would suggest removing the <standard> option for now (until fixed)

```
Model setup
File Load...
Model name Model7
Icon Default
Model type Heli
Tx power 150mW
PPM In Stick
Video Setup
  DEVO Bind
Fixed ID 123456
  Channels 7
Mixer GUI < Advanced>
```

There is possibly no way of putting any symbols other than what is on the devo font, therefore I suggest we remove this option.

```
Main menu
1.Model menu
2.Transmitter menu
3.▷USB
4.About Deviation
```

As far as I know there is no option to use the devo f7 or f4 as usb, if it is true, I suggest we remove this option.

```
Illegal character: (39)
Illegal character: (34)
Illegal character: (176)
Illegal character: (39)
Illegal character: (34)
Illegal character: (43)
Illegal character: (33)
```

List of all the illegal characters.
